

"C4" architecture diagrams for the Electric Maple system

There is a single very-high-level "system context" diagram, a single "container" diagram (showing applications, not deployment containers), and two component diagrams: one for the client side, and one for the server side (which comprises two "containers").

Details on model terminology and notation may be found at <https://c4model.com/>

[System Context] Electric Maple XR Streaming

The system context diagram for the Electric Maple client and server software systems.

[Containers] Electric Maple

Server and client for the Electric Maple system. The server side is two logical "containers": one (possibly persistent) service, and one library loaded by the XR experience.
